A model for personality at three levels - ScienceDirect
Dynamic models can be applied to differences between individuals, not to predict trial to trial dynamics, but rather to model relative rates of growth and decay. Between

individuals, we notice differences in time spent doing various activities. We do not observe growth rates, but we do observe frequencies, latencies, and persistence. Perhaps most notably, we learn to recognize the patterning.

Models of Personality |authorSTREAM

PERSONALITY : PERSONALITY is a collection of emotional, thought, and behavioral patterns unique to a person that is consistent over time. The idea that we can understand ourselves and others by categorizing the ways in which we experience, respond, and behave toward the physical and social world has a long tradition.

Big Five personality traits - Wikipedia

The Big Five personality traits, also known as the five-factor model (FFM) and the OCEAN model, is a taxonomy for personality traits. It is based on common language descriptors. When factor analysis (a statistical technique) is applied to personality survey data, some words used to describe aspects of personality are often applied to the same person.

Risk-need-responsivity model for offender assessment and ...

Risk-need-responsivity model and offender risk assessment. The risk principle states that offender recidivism can be reduced if the level of treatment services provided to the offender is proportional to the offender's risk to re-offend. The principle has two parts to it: 1) level of treatment and, 2) offender's risk to re-offend. We will reserve our discussion of offender treatment for later.
