For the past twenty years I have worked as an applied plant virologist, attempting to identify and control virus diseases in field crops. During the last ten years it has been my privilege to present short courses in plant virology to final-year students studying plant pathology, microbiology and general botany.

Virology Journal BioMed Central

The sap was applied on the surfaces of the oldest leaves previously dusted with carborundum. The sap was applied by rubbing the leaves gently with a cotton wool dipped in the sap. Inoculated plants were rinsed thereafter with water. Plants that were mock-inoculated with buffer only served as control. Inoculation was done two weeks after planting. Data collection and analysis Data were
