Research will help cancer survivors reduce their heart risk. Share Facebook, Twitter, Email, share-print. There is a well established link between treatments for breast cancer and the onset of heart disease both leading causes of death in Canada. However, little information exists about how the balance of these risks might affect any

[Heart Cancer: Understanding Cardiac Tumors and Cancers](#)

The cancers most likely to involve the heart include melanoma, breast cancer, lung cancer, liver cancer, esophageal cancer, renal cancer, lymphoma, and thyroid cancer. In people dying of cancer, nearly 10 percent have cardiac involvement on autopsy.

[Cancer Treatment and Heart Failure: What's the Link ...](#)

How Cancer Therapies Affect the Heart. Radiation therapy and chemotherapy can increase a patient's risk of heart failure, heart rhythm abnormalities, and heart attack. That's because radiation and certain cancer drugs, such as antineoplastic and anthracycline chemotherapy agents, can damage or weaken the heart and blood vessels, or cause problems with clotting or blood lipids (cholesterol).

[What are the connections between cancer and heart health?](#)

We work to determine if a cancer patient is at risk for developing heart problems and what we can do to minimize the risk of sustaining a cardiovascular event

while he or she is undergoing treatment.

Prognosis and survival for bladder cancer - Canadian

...

Prognosis and survival for bladder cancer If you have bladder cancer, you may have questions about your prognosis. A prognosis is the doctor's best estimate of how cancer will affect someone and how it will respond to treatment.
