[Cellular Stress Responses: Cell Survival and Cell Death](#)

Whether cells mount a protective or destructive stress response depends to a large extent on the nature and duration of the stress as well as the cell type. Also, there is often the interplay between these responses that ultimately determines the fate of the stressed cell. The mechanism by which a cell dies (i.e., apoptosis, necrosis, pyroptosis, or autophagic cell death) depends on various

[Cell Stress - Nitric Oxide and Cell Stress | Sigma-Aldrich](#)

Cell Stress Oxidative Stress Oxidative stress is imposed on cells as a result of one of three factors: 1) an increase in oxidant generation, 2) a decrease in antioxidant protection, or 3) a failure to repair oxidative damage.

[Measuring ER stress and the unfolded protein response ...](#)

ER stress activates a complex signaling network referred as the Unfolded Protein response (UPR) to reduce ER stress and restore homeostasis. However, if the UPR fails to reestablish the ER to normality, ER stress causes cell dysfunction and death.
