[Coronary circulation - Wikipedia](#)

Coronary circulation is the circulation of blood in the blood vessels that supply the heart muscle (myocardium). Coronary arteries supply oxygenated blood to the heart muscle, and cardiac veins drain away the blood once it has been deoxygenated.

[Coronary circulation | physiology | Britannica.com](#)

Coronary circulation, part of the systemic circulatory system that supplies blood to and provides drainage from the tissues of the heart. In the human heart, two coronary arteries arise from the aorta just beyond the semilunar valves; during diastole, the increased aortic pressure above the valves forces blood into the coronary arteries and thence into the musculature of the heart.

[Coronary circulation - ScienceDaily](#)

The coronary circulation consists of the blood vessels that supply blood to, and remove blood from, the heart. The vessels that supply blood high in oxygen to the heart are known as coronary arteries.

[What Is the Function of the Coronary Circulation ...](#)

Coronary circulation occurs in the coronary arteries, which extend from the aorta to carry blood to the heart muscle. The human heart consists of two coronary arteries that arise from the aorta. During the coronary circulation process, blood is transferred into the coronary arteries and then returned through the coronary veins to the chambers of the heart.

A coronary vein then catches and dumps the blood straight back into the right side of the heart for a quick trip to the lungs. No matter what way it's described scientifically, people should not underestimate the importance of coronary circulation.

Your Coronary Arteries | Cleveland Clinic Health Information

The rest of the right coronary artery and its main branch, the posterior descending artery, together with the branches of the circumflex artery, run across the surface of the heart's underside, supplying the bottom portion of the left ventricle and back of the septum.

Physiology Tutorial - Coronary Circulation

Oxygenated blood is pumped into the aorta from the left ventricle. This is where it enters the right and left main coronary arteries, and subsequent branching feeds the myocardial tissue of all four chambers of the heart (see Figure 7).
