The origins of life remains one of the great unsolved
mysteries of science. Growing evidence suggests that the
first organisms lived deep underground, in environments
previously thought to be uninhabitable, and that microbes
carried inside rocks have travelled between Earth and
Mars.

Astrobiology is a scientific discipline devoted to the study of life in the universe - its origin, evolution, distribution, and future. In 1997, NASA established an Astrobiology program (the NASA Astrobiology Institute - NAI) as a result of a series of new results from solar system exploration and astronomical research in the mid-1990s together with advances in the biological sciences. To help
