Differential Equations - Introduction - Math Is Fun

Differential Equations. A Differential Equation is a  $n$  equation with a function and one or more of its derivatives; Example: an equation with the function  $y$  and its derivative  $dy/dx$ .

Ordinary differential equation - Wikipedia

In mathematics, an ordinary differential equation (ODE) is a differential equation containing one or more functions of one independent variable and the derivatives of those functions. The term ordinary is used in contrast with the term partial differential equation which may be with respect to more than one independent variable.

## MATHEMATICAL MODELING WITH DIFFERENTIAL EQUATIONS M

The graph of a solution of a differential equation is called an integral curve for the equation, so the general solution of a differential equation produces a family of integral curves corresponding to the different possible choices for the arbitrary constants.
