Algebra over a field - Wikipedia

In mathematics, an algebra over a field (often simply called an algebra) is a vector space equipped with a bilinear product. Thus, an algebra is an algebraic structure A , which consists of a set A , together with operations of multiplication, addition, and scalar multiplication by elements of the underlying field F , and satisfies the axioms implied by "vector space" and "bilinear".

Approximately finite-dimensional C^* -algebra - Wikipedia

In mathematics, an approximately finite-dimensional (AF) C^* -algebra is a C^* -algebra that is the inductive limit of a sequence of finite-dimensional C^* -algebras. Approximate finite-dimensionality was first defined and described combinatorially by Ola Bratteli.

Let (A, μ, ν, ρ) be a quasi-product system, and r the group of uniformly finite dimensional homeomorphisms of the path. If $U_j, V_j \in \mathcal{P}_j > 0$ for all j , the associated quasi-product measure is clearly quasi-invariant under r .
