Evolutionary constraints are restrictions, limitations, or biases on the course or outcome of adaptive evolution. The term usually describes factors that limit or channel the action of natural selection. It is not equivalent to evolutionary stasis (absence of change) or even to factors that cause

Genetic constraints on adaptive evolution can be understood as those genetic aspects that prevent or reduce the potential for natural selection to result in the most. Adaptationism (stanford encyclopedia of Jul 21, 2010) Advocates of optimality models treat constraints as presupposed by adaptive genetic constraint hypotheses do evolution: adaptationist. Reading books is the best way of self

Our results highlight the importance of estimating the genetic variance and covariance of ecologically relevant traits for evaluating evolutionary constraints, natural selection and non-adaptive processes on range expansion in invasive species.

Evolution - A-Z - Constraints on adaptation - Wiley-Blackwell

Genetic constraints on adaptation occur when the heterozygote at a locus has a higher fitness than either homozygote. Because homozygotes will always exist, the population will never be perfectly adapted. This is a genetic constraint on adaptation. A famous example of this in humans is sickle cell hemoglobin.
