Geometry of State Spaces of Operator Algebras: Erik M...

Review: From the reviews: "The two books together provide a predominantly self-contained presentation of the geometric theory of operator algebra state spaces, culminating in the classification theorem of Alfsen, Hanche Olsen and Shultz.

In this book we give a complete geometric description of state spaces of operator algebras, Jordan as well as associative. That is, we give axiomatic characterizations of those convex sets that are state spaces of  $C^*$ -algebras and von Neumann algebras, together with such characterizations for the

This monograph presents a complete and self-contained solution to the long-standing problem of giving a geometric description of state spaces of  $C^*$ -algebras and von Neumann algebras, and of their Jordan algebraic analogs (JB-algebras and JBW-algebras).

The dual space of every order unit space  $A$  is a base norm space, with distinguished base the state space of  $A$ , and we can recover  $A$  from  $K$  as the space  $A(K)$  of  $w^*$ -continuous affine functions on  $K$ , cf. (A 19) and (A 20). Thus the dual space of a JB-algebra  $A$  is an order unit space, with State spaces of operator algebras: Basic theory ... construction: if  $\phi$  is any state on an operator algebra  $A$ , one can define an inner product on  $A$  by setting  $\langle x, y \rangle_\phi = \phi(y^*x)$ ; factoring out null vectors and completing then yields a Hilbert space on which  $A$  acts by left multiplication.
