Hemofiltration - Wikipedia

In medicine, hemofiltration, also haemofiltration, is a renal replacement therapy which is used in the intensive care setting. It is usually used to treat acute kidney injury (AKI), but may be of benefit in multiple organ dysfunction syndrome or sepsis. During hemofiltration, a patient's blood is passed through a set of tubing (a filtration **Continuous Veno-Venous Hemofiltration (CVVH) Program ...**

The Continuous Veno-Venous Hemofiltration (CVVH) program is a short term treatment used in ICU patients with acute or chronic renal failure. Usually, hemodialysis is typically done for patients with kidney failure.

Hemofiltration | AREP

Hemofiltration: The rationale to develop hemofiltration (HF) was to overcome the reduced efficacy of diffusion for larger MW solutes. HF has the advantage of removing solutes small enough to pass through the ultrafilter in proportion to their plasma concentration rather than their concentration gradient, as with diffusion.

Renal replacement therapy - Wikipedia

Renal replacement therapy (RRT) is therapy that replaces the normal blood-filtering function of the kidneys. It is used when the kidneys are not working well, which is called renal failure and includes acute kidney injury and chronic kidney disease.
