Hybrid IT Optimization

Hybrid IT optimization starts with application prioritization determining which applications need to move to a robust and reliable 3rd party platform whether it be colocation, managed hosted or cloud.

A hybrid optimization technique coupling an evolutionary ...

This paper proposes a new hybrid optimization technique that merges a genetic algorithm with a local search strategy based on the interior point method. The efficiency of this hybrid approach is demonstrated by solving a constrained multi-objective mathematical test-case.

Hybrid Optimization - The Ten Years of CPAIOR | Pascal van ...

Hybrid Optimization focuses on the application of artificial intelligence and operations research techniques to constraint programming for solving combinatorial optimization problems. This book covers the most relevant topics investigated in the last ten years by leading experts in the field, and

A Distributed Hybrid Event-Time-Driven Scheme for ...

A hybrid event-time-driven scheme is designed to perform asynchronous updates in SNs. The triggering event is defined by a measurement-based condition yet restricted by a triggering cycle, like the sampling period. The triggering scheme is hybrid and integrated at both time and event levels, and is Zeno-free, thus allows more feasibility in the sense of more choices of actuation time.
