Hydrogenosomes and Mitosomes: Mitochondria of Anaerobic Eukaryotes. "Hydrogenosomes and Mitosomes: Mitochondria of Anaerobic Eukaryotes" provides a summary of the current knowledge of these organelles, which occur in unicellular, often parasitic organisms, including human pathogens. The distribution of these organelles is broad.

Hydrogenosomes and mitosomes are mitochondria in the evolutionary sense in that they descend from one and the same eubacterial endosymbiont, but the evolutionary significance of eukaryotic anaerobes that possess hydrogenosomes, mitosomes, and anaerobically functioning mitochondria is an issue of some contention. This chapter serves to further develop the thesis that the role of oxygen in

[Hydrogenosome - Wikipedia](#)

A hydrogenosome is a membrane-enclosed organelle of some anaerobic ciliates, trichomonads, fungi, and animals. The hydrogenosomes of trichomonads (the most studied of the hydrogenosome-containing microorganisms) produce molecular hydrogen , acetate , carbon dioxide and ATP by the combined actions of pyruvate:ferredoxin oxidoreductase , hydrogenase , acetate:succinate CoA transferase and succinate thiokinase .
