[What is an Instant Drug Test? \(with pictures\) - wisegeek.com](#)

An instant drug test can work in one of a few different ways. The most commonly used is a test that screens the person's urine. The test does not actually screen for the presence of the drug or drugs themselves, but rather metabolites in the urine which exist only as a result of a drug being used by a person.

[Drug Instant Test Results vs Lab Tests Results: Cut-offs ...](#)

A drug screen, in the form of a urine cup or oral fluid swab, is first used to detect the presence of a drug or its metabolite in urine or saliva. This is a cheaper and much quicker method than sending a urine or saliva sample directly to a lab for GC-MS (or LC-MS) testing. When the cup or swab detects the presence of a drug or its metabolite, the sample is sent to a lab to confirm this.

Drug Testing FAQ's - Tests, Detection Times, and False ...

Drug testing is the evaluation of a urine, blood or other type of biological sample to determine if the subject has been using the drug or drugs in question. There are many circumstances that may lead to drug testing:

What's the difference between a drug screen and a drug test

If the drug screen detects the presence of any leftover drug metabolites in your sample, your test will come back positive, indicating you've recently used drugs. If this is the case, your sample will typically be sent to a lab for an actual drug test (or confirmation test) to double check for any drug toxins.
