Multiple interventional radiology treatments can be applied for palliative relief and improvement in patient quality of life. The most commonly used interventional radiology techniques include embolization, thermal ablation, vertebral augmentation, cementoplasty, and percutaneous internal fixation. These procedures are associated with unique considerations for the radiology nurse. We review the most common palliative techniques performed by the radiology team for patients with [Interventional radiology with laser in bone ... - ResearchGate](#)

Radiology - Wikipedia

Interventional radiology (IR or sometimes VIR for vascular and interventional radiology) is a subspecialty of radiology in which minimally invasive procedures are performed using image guidance. Some of these procedures are done for purely diagnostic purposes (e.g., angiogram), while others are done for treatment purposes (e.g., angioplasty)
