[Brain tumor - Wikipedia](#)

A brain tumor occurs when abnormal cells form within the brain. There are two main types of tumors: malignant or cancerous tumors and benign tumors. Cancerous tumors can be divided into primary tumors, which start within the brain, and secondary tumors, which have spread from elsewhere, known as brain metastasis tumors.

[Malignant brain tumour \(cancerous\) - Illnesses ...](#)

A malignant brain tumour is a fast-growing cancer that spreads to other areas of the brain and spine. Generally, brain tumours are graded from 1 to 4, according to their behaviour, such as how fast they grow and how likely they are to grow back after treatment.

[Benign vs. Malignant Brain Tumors](#)

Malignant gliomas, the common brain cancers of adults, are not staged in the traditional sense but age at diagnosis, performance status after surgery and tumor histology are important prognostic factors.

[Brain Tumor: Types, Risk Factors, and Symptoms - Healthline](#)

A brain tumor is a collection, or mass, of abnormal cells in your brain. Your skull, which encloses your brain, is very rigid. Any growth inside such a restricted space can cause problems.

[Brain Tumors \(Benign and Malignant\): Symptoms ... - WebMD](#)

Malignant primary brain tumors are cancers that originate in the brain, typically grow faster than benign tumors, and aggressively invade surrounding tissue. Although brain cancer rarely spreads
