**Differences Between a Malignant and Benign Tumor**  
Although there are exceptions for example, although most malignant tumors grow rapidly and most benign ones do not, there are examples of both slow-growing cancerous tumors and non-cancerous ones that grow quickly the main differences between the two types of tumors are clear and consistent.

**Benign and Malignant Tumors: What is the Difference?**

Malignant cells do not have chemical adhesion molecules to anchor them to the original growth site that benign tumors possess. There are many suspected causes of cancer some are widely accepted by the medical community while others are not.

**Malignant Tumor - Symptoms, Diagnosis and Treatment**

A malignant tumor is a group of diseased cells defined by one of three characteristics: uncontrolled growth, invasion and damage of healthy cells, or metastasizing (spreading) to other organs of the body. They differ from benign tumors, which do not spread or affect other areas of the body.
