Mercury-contaminated sites: an environmental time-bomb that is still ticking Mercury from mid-19th century gold rush sites in California and Australia continue to release significant quantities of mercury to the atmosphere and hydrosphere where it is

[Province finds mercury-contaminated soil and possibly ...](#)

Mercury contamination, a serious health risk, has plagued the people there for decades. Dangerous and persistently high levels of mercury found in the river sediment and fish in the river system

[Remediation of mercury contaminated sites A review ...](#)

Environmental contamination caused by mercury is a serious problem worldwide. Coal combustion, mercury and gold mining activities and industrial activities have led to an increase in the mercury concentration in soil. [Contaminated Sites - Province of British Columbia](#) Contaminated Sites Many sites in the province became contaminated during past industrial or commercial activities that resulted in chemicals or toxic materials being spilled or deposited on land. The most common contaminants include heavy metals such as lead, arsenic, cadmium, and mercury.

[CLU-IN | Contaminants > Mercury > Treatment Technologies](#)

Roasting/retorting and incineration are thermal techniques and the most commonly used for treating mercury-contaminated waste. Roasting/retorting operations separate the mercury from the rest of the waste stream and condense it for recovery or removal.

### Mercury Contaminated Sites: A Review of Remedial Solutions

Mercury Contaminated Sites: A Review of Remedial Solutions Jennifer Hinton, jhinton50@hotmail.com

Marcello Veiga, veiga@mining.ubc.ca The University of British Columbia, Vancouver, BC Canada The physio-chemical characteristics of mercury have made it a favourable component for many industrial and agricultural applications. Significant anthropogenic Hg sources include fossil fuel combustion

### Mercury in the Environment - USGS

Mercury is a highly toxic element that is found both naturally and as an introduced contaminant in the environment. Although its potential for toxicity in highly contaminated areas such as Minamata Bay, Japan, in the 1950's and 1960's, is well documented, research has shown that mercury can be a
