Nucleic Acids - Function, Examples, and Monomers
Nucleic acids are molecules that allow organisms to transfer genetic information from one generation to the next. These macromolecules store the genetic information that determines traits and makes protein synthesis possible.
Nucleic Acids and Molecular Biology - springer.com
Since its inception in 1987, Nucleic Acids and Molecular Biology has emerged as a high-visibility series that brings to the scientific community in-depth analyses of cutting-edge topics in the field.

Molecular Structure of Nucleic Acid (With Diagram)
Nucleic acids are polynucleotides consisting of nucleotides linked to each other by phosphodiester bonds. Each phosphoric acid molecule forms two ester bonds, one with the 3-OH group of one ribose or deoxyribose of a nucleoside and the other with the 5 -OH group of ribose or deoxyribose of another nucleoside.

Biology Molecular Biology Basics Nucleic Acids. Key Questions. How do nucleotides polymerize to form nucleic acids? The polymerization reaction is mediated by an enzyme, but the overall reaction is basically an esterification reaction between an alcohol and a phospho acid. The alcohol group is located on the 3end of the sugar of the nucleotide, and the phospho acid group is on the 5 end of the

It provides reviews of various aspects of nucleic acid nanotechnology, each written by an internationally leading expert in the field, and presents state-of-the-art and recent advances in nucleic acid synthetic modifications, nanoscale design, manipulation and current and future applications in bioengineering, medicine, electronics, genetic analysis, chemistry, molecular biology, surface and **Nucleic Acids Examples and Their Functions | New Health ...**

The many examples of nucleic acids including RNA (ribonucleic acid) and DNA (deoxyribonucleic acid) are composed of monomers called nucleotides. A nucleotide contains 3 components: a nitrogenous base, a phosphate group and a 5-carbon sugar. If the sugar is ribose, then its polymer is RNA. If it is deoxyribose, then its polymer is DNA.

The treatment is quite short (17 articles in 270 pages), up to date.

Nucleic acid - Wikipedia

The term nucleic acid is the overall name for DNA and RNA. They are composed of nucleotides, which are the monomers made of three components: a 5-carbon sugar, a phosphate group and a nitrogenous base.

Nucleic Acids and Molecular Biology Volume 5: F. Eckstein ...

Molecular biology is one of the most rapidly developing and at the same time most exciting disciplines. The key to molecular biology lies in the understanding of nucleic acids - their structure, function, and interaction with proteins.

Nucleic Acid Structure | Biology Dictionary

In a nucleic acid double helix, the major groove is the wider path that opens between two the two nucleic acid strands, while the minor groove is the narrower one. In some cases these grooves may serve as binding sites for other molecules.
