By using the density functional theory, we find that organometallic multidecker sandwich clusters $V_{2n+1}Cp_{2n+2}$, $V_n(FeCp_2)_{n+1}$ ($Cp = \text{cyclopentadienyl}$), and $V_{2n}Ant_{n+1}$ ($Ant = \text{anthracene}$) may have linear structures, and their total magnetic moments generally increase with the cluster size.

On-surface synthesis approach to preparing one-dimensional ...

Magnetic organometallic polymer chains were prepared by Ullmann coupling of dibromo-biphenyl activated by extrinsic Ni atoms on Au(100) surface and were confirmed by Kondo resonance measurement. Such an on-surface preparation strategy may provide an efficient approach to preparing unentangled organometallic and pure organic polymer chains and subsequently measuring their properties at surfaces.

Band-Structure Properties of One-Dimensional Polydecker ...

Abstract. The one-dimensional polydecker compounds collected in fig. IV.7 are suitable model systems for a transparent investigation of the dependence of band structure properties on the type of the central 3d atom and the stoichiometry of the organic ligand [IV.23].

Herein I report the synthesis of a new family of organometallic reduced mesoporous niobium oxide composites with mixed oxidation-state organometallic nanowires in the pores and investigate their electronic and magnetic properties. This is a wonderful system which allows us to systematically study one-dimensional molecular metals based on the
