Pesticides and Human Health

Pesticides and Human Health Pesticides have a specific purpose in society. Pesticides are intended to kill organisms that cause disease and threaten public health, control insects, fungus, and weeds that damage crops, control pests that damage homes and structures vital to public safety. Because people use pesticides to kill, prevent, repel, or in some way adversely affect some living organisms, they can be harmful to humans. **Agricultural Pesticides and Human Health - Case Studies**

Agricultural Pesticides and Human Health Author: Bridget Hicks This case study is part of a collection of pages developed by students in the 2012 introductory-level Geology and Human Health course in the Department of Earth Sciences, Montana State University.
