The first four digits reflect the volume number. Base 36 numbering is employed for the last two digits and

**Quantum Optics with One Atom in an Optical Cavity**

Another frontier of quantum optics is the interface between the quantum and classical dynamics of nonlinear optical systems [4, 5, 6]. A single atom in a cavity can span both classical and quantum dynamics. This is achieved via the saturation photon number  $n_s$ , which is proportional to the cavity-mode volume. Small  $n_s$  yields the quantum limit of few cavity photons while large  $n_s$  yields the
