REMOTE SENSING TECHNOLOGY AND ITS APPLICATIONS

Remote sensing is the science and art of obtaining information about an object through the analysis of data acquired by a device that is not in contact with the object. Remote Sensing | An Open Access Journal from MDPI Remote Sensing (ISSN 2072-4292) is a peer-reviewed open access journal about the science and application of remote sensing technology, and is published semi-monthly online by MDPI. Remote Sensing is affiliated to The Remote Sensing Society of Japan (RSSJ) and members receive a discount on the article processing charge.

Remote Sensing Instructions for Authors - mdpi.com Remote Sensing accepts articles that have previously been made available as preprints provided that they have not undergone peer review. A preprint is a draft version of a paper made available online before submission to a journal.

Principles of Remote Sensing - Centre for Remote Imaging ...

Remote sensing images are normally in the form of digital images. In order to extract useful information from the images, image processing techniques may be employed to enhance the image to help visual interpretation, and to correct or restore the image if the image has been subjected to geometric distortion, blurring or degradation by other factors.

Remote Sensing - NASA Earth Observatory

Remote sensing is the science and art of identifying, observing, and measuring an object without coming into direct contact with it. This involves the detection and measurement of radiation of different wavelengths reflected or emitted from distant objects or materials, by which they may be identified and categorized.

Remote Sensing of Environment - Journal - Elsevier

Remote Sensing of Environment serves the Earth observation community with the publication of results on the theory, science, applications, and technology of remote sensing studies. Thoroughly interdisciplinary, RSE publishes on terrestrial, oceanic and atmospheric sensing. The emphasis of the journal is on biophysical and quantitative approaches to remote sensing at local to global scales.

Applications of remote sensing to groundwater hydrology

remote sensing is a useful technique for the study of groundwater hydrology and has aided the successful location of important groundwater resources. 1 INTRODUCTION According to Lamoreaux (1984) "Remote sensing is an excellent tool for hydrologists and geologists to better understand the perplexing problems of groundwater exploration." However, of all the hydrological applications of remote

What is Remote Sensing? - isprs.org

Most remote sensing images are composed of a matrix of picture elements, or pixels, which are the smallest units of an image. Pixels are normally square and represent a certain area on an image. It is important to distinguish between pixel size and spatial resolution. If a sensor has a spatial resolution of 20 m and an image from that sensor is displayed at full resolution, each pixel
