[Cancerous tumours of the testicle - Canadian Cancer Society](#)

A cancerous tumour of the testicle can grow into nearby tissue and destroy it. It can also spread (metastasize) to other parts of the body. Cancerous tumours are also called malignant tumours. Germ cell tumours. More than 90% of all testicular cancers are germ cell tumours. This type of cancer starts in germ cells, which are the cells that make sperm. The 2 main types of germ cell tumours that develop in the testicles are seminomas and non-seminomas. Each type of tumour grows differently and

### Testicular Cancer - Genitourinary Disorders - Merck ...

Most testicular cancers originate in primordial germ cells. Germ cell tumors are categorized as seminomas (40%) or nonseminomas (tumors containing any nonseminomous elements). Nonseminomas include teratomas, embryonal carcinomas, endodermal sinus tumors (yolk sac tumors), and choriocarcinomas. Histologic combinations are common; eg, teratocarcinoma contains teratoma plus embryonal carcinoma. Functional interstitial cell carcinomas of the testis are rare.

### What is testicular cancer? - Canadian Cancer Society

Testicular cancer starts in the cells of the testicle. A cancerous (malignant) tumour is a group of cancer cells that can grow into nearby tissue and destroy it. The tumour can also spread (metastasize) to other parts of the body.
