Circumventricular organs - Wikipedia

Circumventricular organs. CVOs can be classified as either sensory or secretory organs serving homeostatic functions and body water balance. The sensory organs include the area postrema (AP), the subfornical organ (SFO) and the vascular organ of lamina terminalis, all having the ability to sense signals in blood.

Sensory circumventricular organs in health and disease ...

Abstract. Circumventricular organs (CVOs) are specialized brain structures located around the third and fourth ventricles. They differ from the rest of the brain parenchyma in that they are highly vascularised areas that lack a blood brain barrier.

Circumventricular Organs: A Novel Site of Neural Stem ...

In the present study, we show that in adult rat and mouse, the circumventricular organs (CVOs) are rich in nestin +, GFAP +, vimentin + cells which express Sox2 and the cell cycle-regulating protein Ki67.

Sensory circumventricular organs in health and disease

Circumventricular organs (CVOs) have been regarded as likely points of communication between the blood, the cerebrospinal uid (CSF) and the brain parenchyma [69, 3973970 - PubMed Central (PMC)]

The circumventricular organs (CVOs) are atypical brain structures lining the third and fourth ventricles, and are found in the brain of all vertebrates. They play a role in regulating body homeostasis based on blood brain communication (Gross and Weindl, 1987).
