1.2 Topological approach The main goal of our study is an attempt to understand and classify nonsmooth structures arising in (1.1) within the optimization setting. The basis of such a comparison is the topological approach. It encompasses two objects of study: the feasible set $M[F]$ and the lower-level sets $M[f, F]_a := \{x \in M[F] \mid f(x) \leq a\}$, $a \in \mathbb{R}$. These objects are considered along

Topological aspects of nonsmooth optimization . By Vladimir Shikhman. Abstract. The main goal of our study is an attempt to understand and classify nonsmooth structures arising within the optimization setting: $P(F)$: $\min \{f(x) \text{ s.t. } x \in M(F)\}$, where f is a smooth real-valued objective function, F is a smooth vector-valued function and $M(F)$ a feasible set defined by F in some structured way.
